

selkirk flood protection scheme

Welcome

Public Exhibition Number 1 - the Options

Introduction

This is the first of two exhibitions to inform the public of progress with this important Scheme to protect Selkirk from the threat of flooding.

The purpose of this exhibition is to show our current thoughts on how we can reduce flood risk (the options) and allow you the opportunity to make your suggestions and comments count. We would like to know your opinions on the options.

The Scheme is being promoted under the new Flood Risk Management (Scotland) Act to deliver protection from flooding to over 300 properties and businesses in and around Selkirk whilst bringing potential benefits to the stunning natural and built environments of the Ettrick and Yarrow valleys.

Aims and Objectives

The display boards and presentations are intended to provide you with the following information:

- Show how flooding has devastated Selkirk in the past
- Show you the current risk of flooding within the town
- Explain to you the options available for flood protection measures for the Ettrick Water, Long Philip Burn and Shaw Burn

We hope you find the exhibition informative and interesting. Our team will be pleased to answer any questions you may have.

Please take time to fill in our questionnaire – you can do it here, use the forms on our website, or take it home and post it in – remember, your opinions will be considered when we carry out the next design stage.
